Anthophyllite

Actinolite

In accordance with the National Emission Standards for Hazardous Air Pollutants (NESHAP), an asbestos survey is required when regulated amounts of any building material will be disturbed during a renovation or demolition, regardless of the age of the building. This applies to any commercial building or residential buildings with more than four (4) dwelling units. Asbestos can be found in flooring, gaskets, mastic's, glues, coatings, decorative & acoustical coverings, wall and ceiling systems, electrical wiring and fuse boxes, roofing, exterior siding & felt papers as well as many other building materials.

Only individuals with the proper training and experience are qualified to perform asbestos building inspections for submittal to local permitting agencies. A comprehensive asbestos survey prevents "surprises" on your jobsite and enables you to prepare for and budget mitigation costs in advance of demolition activities. More importantly, a thorough asbestos survey protects your company from EPA and OSHA liability. GFA's staff of Certified Industrial Hygienists, Florida Licensed Asbestos Consultants, and environmental scientists can guide you through the maze of OSHA and EPA regulations. Our services include:

- Asbestos Containing Materials (ACM) Building Surveys
- Asbestos Abatement Project Clearance Testing
- Asbestos Abatement Specification development
- Asbestos Abatement Contractor Supervision and Project Administration
- Asbestos Operations and Maintenance (O&M) Plans
- Employee Exposure Negative Exposure Assessments (NEA) for OSHA compliance
- Personal monitoring for OSHA compliance

## GFA's Licenses & Certifications:

- State of Florida Asbestos Business Organization (ABO) License No. ZA404
